

[Home Page](#)

Welcome on InterLDAP website!

- [Presentation](#)
- [Start using InterLDAP](#)
- [Other sub-projects](#)

## ***Presentation***

InterLDAP is a collection of libraries and components aimed to build a rich LDAP content management application.

It uses well-known java technologies:

- Spring 2.0
- Tapestry 5
- Chenillekit
- Maven

## ***Start using InterLDAP***

To get all InterLDAP maven artefacts, just update your pom.xml to add a dependency:

```
<dependency> <groupId>org.interldap</groupId> <artifactId>wui-common</artifactId>  
<version>0.6</version> </dependency>
```

InterLDAP artefacts are hosted on this repository:

```
<repository> <id>interldap-site</id> <name>InterLDAP</name>  
<url>http://84.14.175.231/maven2</url> </repository>
```

## ***Other sub-projects***

InterLDAP host some other little projects, dealing with identity management:

- atransport-engine: a little daemon that send files over differents protocols (FTP, SSH, SMTP, ...)

Legacy InterLDAP sub-projects:

- LSC: see <http://www.lsc-project.org>.

## InterLDAP - Wiki - Main - WebHome

- Nagios and Cacti plugins: see <http://www.ltb-project.org>.
